

TAILOR-MADE ENERGY SOLUTIONS.

Individual. Efficient. Sustainable.

From planning to implementation

**WE SHAPE THE
TRANSITION — WITH
ENERGY FOR A FUTURE
THAT IS WORTH LIVING.**

Brüninghoff Energy Solutions GmbH & Co. KG

HIGHLY EFFICIENT IN PRACTICAL IMPLEMENTATION

- > **specialist in sustainable energy solutions** – from photovoltaic systems to solar car ports through to battery storage facilities and charging infrastructure
- > **all-encompassing solutions** thanks to tailor-made energy concepts for commercial and industrial customers as well as public institutions and local authorities
- > **energy management systems** for efficient organisation and sustainable optimisation of energy systems
- > **project development and implementation** in new-build projects and also the modernisation of existing buildings
- > **sustainability as guiding principle** with the fundamental objective of reducing CO₂ emissions and contributing towards the energy transition

Our services at a glance

FOR THE INDUSTRIAL SECTOR AND LOCAL AUTHORITIES

- › planning and setup of photovoltaic systems and main backup systems
- › planning and implementation of connections to the power supply
- › checks and inspections of existing systems
- › design and provision of charging infrastructure for e-vehicles (charging parks and points)
- › configuration of battery storage systems for new and existing systems
- › conversion and repowering of existing systems
- › cleaning of photovoltaic systems
- › removal and disposal of photovoltaic systems
- › evaluation of electrical damage to building services and photovoltaic systems (qualified expert)

Our services at a glance

CERTIFIED EXPERT

- › DEKRA-certified expert specialising in damage to photovoltaic systems
- › IQ-ZERT-certified expert in insurance claims for electrical systems
- › DEKRA-certified expert for assessment of electrical damage
- › VdS qualified expert for photovoltaic systems

Focus on sustainability

KEY TO ENERGY TRANSITION

As part of Brüninghoff Group, Brüninghoff Energy Solutions makes a decisive contribution to establishing the use of sustainable construction methods and energy efficiency in the construction industry.

- > expansion of the construction portfolio through integration of sustainable energy systems
- > all-encompassing approaches for building concepts which are future proof in terms of construction method and energy supply
- > Innovative energy concepts are integrated into projects early on and are planned and built by Brüninghoff so they are optimally tailored to the requirements of the relevant customer.

About Brüninghoff Group

PLANNING. MANUFACTURING. BUILDING.

Six companies operate as part of Brüninghoff Group. For more than 50 years Brüninghoff Group has been perfecting its craft in industrial prefabricated construction using combinations of timber, concrete, steel and aluminium. 700 employees carry out planning, production and construction activities and also provide building asset services.

We are the driving force behind innovations and develop pioneering technology for sustainable resource-efficient component, building and energy solutions. We see the building within a life cycle, provide all services from a single source and also reuse the products we develop.
